Emmanuel Chukwuere

Cloud Engineering & DevOps

Nigeria | Phone: +234 8169262188 | Email: emmanuelchukwuere.me@gmail.com | GitHub: https://github.com/Emmanuel-Devo

Status: Open to Cloud Engineering and DevOps Internship Opportunities

PROFESSIONAL SUMMARY

I am an aspiring Cloud and DevOps Engineer with a background in Electrical and Electronics Engineering and formal training in Cloud Engineering. I am interested in cloud infrastructure, Linux administration, containerisation, infrastructure automation and cloud-native technologies.

I enjoy learning by building practical projects, solving technical problems and exploring technologies that improve the deployment, management and reliability of modern applications.

My goal is to grow into a skilled Cloud/DevOps Engineer by contributing to real-world engineering projects and learning from experienced professionals.

TECHNICAL SKILLS

- **Languages:** C#, Python, HTML, CSS, JavaScript
- **Cloud & Infrastructure:** AWS (EC2, VPC, IAM, S3, EKS), Load Balancing, Terraform (IaC)
- **Networking:** TCP/IP, DNS, HTTP/HTTPS, Network Troubleshooting, Fiber Optics
- **Systems & DevOps:** Linux (Ubuntu), Windows, Bash Scripting, Git, Docker, Kubernetes, Helm, CI/CD (Jenkins), MySQL

FEATURED PROJECTS

Three-Tier EKS Infrastructure & Task Platform (2026) — *AWS EKS, Terraform, Kubernetes, Docker*

Repository: https://github.com/Emmanuel-Devo/three-tier-task-platform

Built a task platform for creating, managing, and tracking user tasks. Automated AWS infrastructure provisioning with Terraform for scalable deployment and configured Kubernetes services for application workloads.

- Built a task platform for creating, managing, and tracking user tasks.
- Automated AWS infrastructure provisioning with Terraform for scalable application deployment.
- Configured Kubernetes services to manage frontend, backend, and database workloads.

CI/CD Two-Tier Flask Application (2026) — *Jenkins, Docker, Linux, MySQL, CI/CD*

Repository: https://github.com/Emmanuel-Devo/cloudlab-flask-devops

Built a Flask application for managing business data with MySQL, configured Linux services for reliable operations, and automated builds and deployments using Jenkins and Docker.

- Built a Flask application for managing business data with MySQL.
- Configured Linux services for reliable application and database operations.
- Automated application builds and deployments using Jenkins and Docker.

Cloud-Native Kubernetes Platform (2026) — *Kubernetes, Docker, Git, Cloud-Native Technologies*

Repository: https://github.com/Emmanuel-Devo/cloud-native-kubernetes-platform

A cloud-native project focused on containerised applications, Kubernetes deployments and cluster management.

- Managed containerized applications and services within Kubernetes clusters.
- Authored declarative manifests for deployments, services, and workload configurations.
- Maintained version-controlled infrastructure and deployment manifests using Git.

Linux Server Administration Lab (2025) — *Linux, Ubuntu, Vagrant, VirtualBox, Bash, Git*

Repository: https://github.com/Emmanuel-Devo/linux-server-administration-lab

A practical Linux administration environment exploring server provisioning, user management, permissions, SSH access, networking and command-line administration.

- Provisioned virtual Linux environments using Vagrant and VirtualBox.
- Configured user accounts, file permissions, and secure SSH key-based access.
- Administered system services, networking configuration, and command-line automation using Bash.

Container Assessment Project (2025) — *Docker, Containers, Linux, Git*

Repository: https://github.com/Emmanuel-Devo/container-assessment

Containerization assessment exploring Docker image packaging, multi-container communication, and application environment configurations.

- Containerized applications using custom Dockerfiles with isolated dependencies.
- Configured container networking and storage volumes for data persistence.
- Validated container health and lifecycle management in Linux environments.

Cloud Engineering Month-One Assessment (2025) — *Linux, Bash, Git, System Administration*

Repository: https://github.com/Emmanuel-Devo/month-one-assessment

Foundational cloud engineering project covering Linux operating system setup, Bash shell scripting, permissions, and Git version control workflows.

- Implemented automated Bash scripts for routine system administration tasks.
- Configured Linux file system permissions, directory trees, and user permissions.
- Utilized Git version control for tracking code changes, branching, and repository commits.

EXPERIENCE

Manager — Brooke-Eshcol System Ltd (February 2025 – July 2025)

Port Harcourt, Rivers State

- Coordinated daily operations for 4 staff and 2 SIWES students, assigning tasks and tracking progress.
- Taught 2 SIWES students web development through practical coding exercises and projects.
- Collaborated with staff to resolve technical issues and keep daily operations running smoothly.

Web Development Tutor / Project Manager — KineticSoft (July 2021 – April 2023)

Port Harcourt, Rivers State

- Taught 15 students web development through practical coding exercises and projects.
- Collaborated on a Waste Energy System project, developing the front end of the website.
- Guided students through projects, debugging code and supporting successful project completion.

EDUCATION

Master of Information Technology (MIT) (September 2026 – Present)

Miva Open University — Remote

Status: In Progress

B.Eng. Electrical/Electronics Engineering (Communication Engineering) (October 2018 – November 2024)

University of Port Harcourt — Port Harcourt, Rivers State

Certificate issued: 23 April 2025

PROFESSIONAL DEVELOPMENT & CERTIFICATES

Certificate in Fiber Optics and Cloud Networking (4 February – 24 October 2026)

Speedlink Institute of Technology and Innovation — Port Harcourt, Rivers State

Practical networking, fiber optics infrastructure, and cloud routing.

Diploma in Cloud Engineering (August 2025 – July 2026)

AltSchool Africa — Remote

Status: Completed
